System Architecture Diagram (3-tier architecture)

Note: See diagram above for technologies that will be utilized and how they interact.

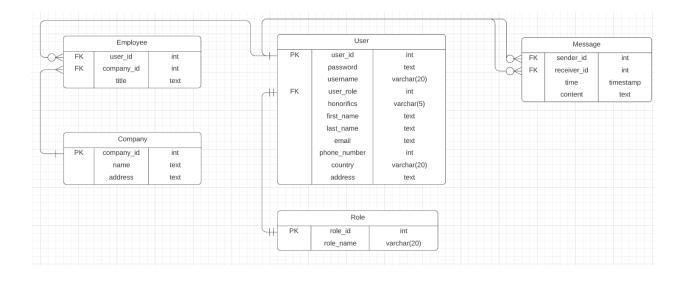

The Presentation Tier is the front end layer – consists of the user interface

The Business Logic Tier contains functional business logic – capabilities of the web application The Database Tier contains the database

Frontend

Class Name: Home	
Parent Class (if any): Subclasses (if any):	
Responsibilities: • Serves as a general landing page that allows users to signup and login	Collaborators: • SignUp • LogIn

Class Name: LogIn	
Parent Class (if any): Subclasses (if any):	
Responsibilities: • Authenticates the user • Redirects said user to their personalized dashboard upon successful authentication	Collaborators: • Home • SignUp

Class Name: SignUp	
Parent Class (if any): Subclasses (if any):	
Responsibilities: • Allows the user to create an account	Collaborators: • Home • LogIn

Class Name: Dashboard	
Parent Class (if any): Subclasses (if any):	
Responsibilities: • Provides the user with shortcuts to various sections of the application	Collaborators:

Class Name: NavBar	
Parent Class (if any): Subclasses (if any):	
Responsibilities: • Provides the user with links to various sections of the application	Collaborators:

Class Name: Profile Parent Class (if any): Subclasses (if any): PartnerProfile EntrepreneurProfile InstructorProfile CompanyProfile CompanyProfile Responsibilities: Displays information about a user Collaborators: NavBar

Class Name: Messaging	
Parent Class (if any): Subclasses (if any):	
Responsibilities: • Provides a user with the ability to message another user	Collaborators: • NavBar

Class Name: Discussions	
Parent Class (if any): Subclasses (if any):	
Responsibilities: • Provides a user with the ability to create a post	Collaborators: • NavBar

Class Name: Assignments	
Parent Class (if any): Subclasses (if any): TeacherAssignment	
Responsibilities: • Allows a user to see all created assignments	Collaborators: • NavBar

Class Name: EntrepreneurProfile	
Parent Class (if any): • Profile Subclasses (if any):	
Responsibilities: • Displays information about an entrepreneur	Collaborators: • NavBar

Class Name: InstructorProfile	
Parent Class (if any): • Profile Subclasses (if any):	
Responsibilities: • Displays information about an instructor	Collaborators: • NavBar

Class Name: PartnerProfile	
Parent Class (if any): • Profile Subclasses (if any):	
Responsibilities: • Displays information about a partner	Collaborators: • NavBar

Class Name: CompanyProfile		
Parent Class (if any): • Profile Subclasses (if any):		
Responsibilities: • Displays information about a company	Collaborators: • NavBar	

Class Name: TeacherAssignment	
Parent Class (if any): • Assignment Subclasses (if any):	
Responsibilities: • Allows a teacher to post/view/grade assignments	Collaborators: • NavBar

Backend

Class Name: Routes/ProfileRoutes		
Parent Class (if any): Subclasses (if any):		
Responsibilities: • Handles request related to user profiles – signup, sign in, sign out, update profile	Collaborators:	

API Documentation

Authentication Route

/api/auth/

• All routes prefixed with /api/auth/ are passed through authentication middleware before going to their destined route.

Profile-Based Routes

Method	HTTP Request Verb	Description
/api/profile/register/	POST	Profile Creation
		Username and other registration fields should be sent in JSON. Headers: Content-Type: application/json
/api/profile/update/	PUT	Update profile
/api/profile/delete/	DELETE	Delete profile
/api/profile/login/	POST	Login to website. Session cookie should be sent from server to the client.
/api/profile/logout/	GET	User logout. Client browser and server should destroy the session cookie associated with the client-server connection.
